

Bywood Electronics is pleased to be advertising in this, the first issue of 'Personal Computer World', a magazine which, we feel, has a great future and one which will go a long way to educate the engineers and hobbyists in a field of technology which has both present and future applications.

Bywood Electronics is one of industry's leading experts in the technology of clock circuits and their application. With some 72 different circuits, all of which are coupled to displays, they can be used as a teaching tool, or by the enthusiastic amateur. This system is called Monolithic Horometric Integration (MHI), a term which originated at Bywood's and is now accepted nationally as a term for describing digital clock technology and peripheral applications.

Bywood Electronics was the first company to take some of the mystique out of microprocessor usage. The company has designed and produced what are undoubtedly two of the lowest cost microprocessor evaluation kits, SCRUMPI I and II, to appear on the market. Designed around the National Semiconductor SC/MP microprocessor, the kits give invaluable hands-on experience to engineers of all levels of expertise.

Bywood Electronics, distributes all the support devices for the SC/MP microprocessor — RAMs, ROMs etc, and also provides a PROM programming service. The company operates a large software library which includes device information, circuit design for the clock kits, SA400 mini floppy diskette storage drive manuals and the SC/MP support manuals.
